

COMPLETE B2C PRODUCT SAMPLE

Your strongest next move is Site Reliability Engineering.

You already show the operating signals. The market sample is too small to rank gaps, so validate the work before buying training or rewriting your CV.

EUR 29 ONE-OFF

Career Move Report

One country. Up to three directions.
Evidence map. Current opportunities.
Three next moves. PDF, 12 months of
access and one revision.

SYNTHETIC PROFILE

8 years Platform Engineering | Spain | explore adjacent directions

Evidence frozen 20 September 2026 | CV content is synthetic | no personal data

One free answer. One complete paid decision.

FREE - CAREER RADAR

Site Reliability Engineer

Why it appeared, one current market check and one action: compare the title language with exact examples before changing the CV.

PAID - EUR 29 ONCE

Three directions and a decision

Comparison, evidence map, controlled history, current examples, three actions, PDF, 12-month access and one revision.

RECOMMENDATION

Choose SRE as the hypothesis. Do not commit yet.

Continue if three reviewed descriptions match work you can prove and want to repeat. Otherwise widen the search to platform and cloud titles before investing in retraining.

01 PRIMARY

Site Reliability Engineer

Supported by Kubernetes, monitoring, incident response and reliability.

02 ADJACENT

Platform / DevOps

Supported by Docker, Kubernetes and Terraform. Comparison withheld.

03 ADJACENT

Cloud Engineer

Supported by AWS, Kubernetes and Terraform. Comparison withheld.

Two exact titles. Fifty-six broad topic matches.

Spain | recent direct employer ATS sample | fetched 20 September 2026 at 02:15 UTC | current public postings, not a national total

285

published rows in Spain feed

2

exact SRE titles / 2 employers

56

title-or-observability matches

20

broad matches with reliability

EXACT-TITLE EXAMPLE

Senior Site Reliability Engineer

Lodgify | Spain | remote | dated 27 August 2026 | reliability, incident response, observability and Kubernetes.

EXACT-TITLE EXAMPLE

Senior Site Reliability Engineer

Cabify | Madrid | dated 9 January 2026 | reliability, observability, Kubernetes, monitoring and scalability.

QUALITY GATE

No priority gap and no trend arrow

Two exact titles are below the 20-record ranking threshold. Daily-feed changes are not filtered to SRE, so they cannot be used as an SRE trend.

Prove ownership, not tool exposure.

Absence from a CV means not confirmed, not does not know. The user confirms signals before derived profile data leaves the browser.

CONFIRMED IN PROFILE

Transferable signals

Kubernetes Monitoring Incident response
Reliability AWS, Terraform and Docker

BUILD PROOF

One reliability story

An incident coordinated A reliability target owned
A production tradeoff A control introduced An
observable outcome

WITHHELD

Unsupported claims

Priority missing skill Demand growth or decline
Salary expectation Hiring probability National
market size

INTERPRETATION

The current evidence supports a direction and a validation plan. It does not support buying a specific course, predicting interview success or declaring that SRE is growing in Spain.

Three moves. Each can change the decision.

01

Validate the work

Compare the two exact SRE examples with three broader platform/reliability roles. Mark responsibilities you can prove and want to repeat.

Stop if fewer than three roles pass both tests.

02

Build one evidence story

Write a one-page reliability case: context, signal, incident or risk, decision, control and measurable outcome. Remove confidential details.

Continue if it proves ownership, not tool exposure.

03

Run a narrow test

Use the SRE profile for five well-matched applications or conversations. Record the response and objections.

Revisit the direction after five comparable attempts.

Unavailable is a product result, not a missing section.

CONTROL 1

Three comparable periods

Not available for the same SRE cohort and definition.

CONTROL 2

Stable definition and sources

The daily feed comparison covers all Spain records, not the narrowed role.

CONTROL 3

20 records per period

The current exact-title cohort contains only two records.

VERDICT

Do not call the role growing, stable or disappearing.

The report withholds the trend. A future edition can publish it only when the same role definition, source coverage and minimum cohort pass across three periods.

This is how MisuJob uses a large historical corpus without turning collection changes or open-job counts into false labour-market conclusions.

The limits are part of the answer.

OBSERVED

What the data contains

Synthetic profile signals. Public employer postings in Spain. Exact-title and broad-topic cohorts kept separate. Dated current examples.

DERIVED

How directions appear

Explainable matches between confirmed signals and a reviewed 23-family career catalogue. No opaque employability score.

NOT CLAIMED

Outside this evidence

National market size, worker supply, salary truth, future demand, actual skill possession, interview or hiring probability.

SOURCE AND COVERAGE

MisusJob public evidence API | schema career-job-evidence.v3 | source family direct-ats-daily | fetched 20 September 2026 at 02:15 UTC. Source or index dates may lag the employer. Records without reviewed country classification are omitted. This current sample is not the complete historical corpus.

Commercial scope: EUR 29 one-off, one country, up to three directions, one revision in seven days and 12 months of access. Checkout is not active in this sample.
